Designed by Climbers  
for Climbers

## CLIMBING WALLS

Bendcrete, designer and builder of artificial climbing walls since 1972 is now an established market leader. Over 100 realistic rockfaces have been installed for enthusiasts to practice and learn the art of climbing.

Bendcrete walls are built by climbers for climbers. At every stage of design and development customers are consulted on the kind of wall they want.

The Company has pioneered much new technology. Using its own climbing laboratory and a specially designed hydraulic test rig, it has worked with leading international climbers to develop high performance walls.

Every Bendcrete wall is unique, individually crafted so future improvements can be made - quite unlike the standard walls delivered by mass production. We happily tackle new ideas. Whether the project is large or small we build to the client's satisfaction.

Our staff is drawn from a wide background - The British Mountaineering Council, Sports Council, Local Government, Outdoor Education and the Construction Industry.

Discuss your project with us, by working with you we can make the best use of your available funds. We can install in existing buildings, new buildings and outdoor sites.

## DESIGNING A CLIMBING WALL

This is a creative, complex process which must go right first time. To get it wrong is expensive. We recommend that once a decision has been made to acquire a wall, the client should produce a design brief. This is not difficult - it's a way of organising your ideas. To help you, we have published a brief design guide.

We also recommend you consult and involve your local climbers. There will be conflicting demands from novices and experienced competitive climbers. Site, budget, function and management are also factors to consider.

Experience accumulated at Bendcrete will help you choose the right priorities. Our service can include feasibility studies, income predictions, management and marketing plans.

We listen to clients and offer unbiased advice. Your customers are our customers, our service helps you to serve them.

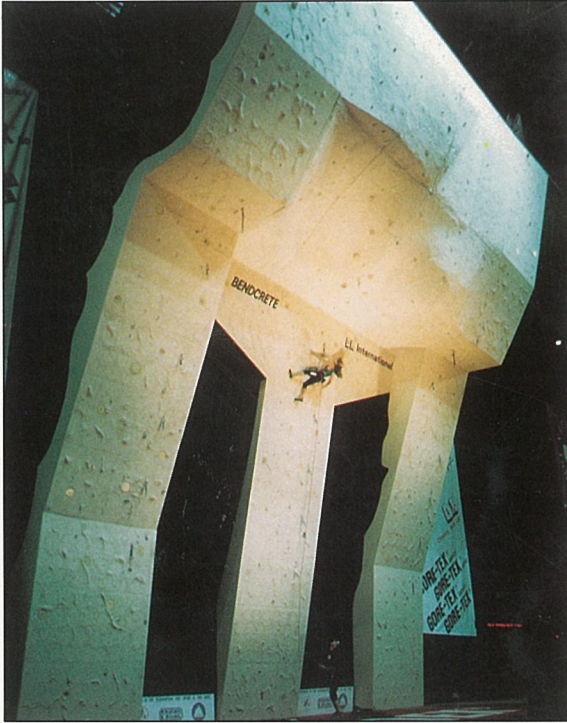

## BENDCRETE QUALITY ASSURANCE

Our philosophy is to provide quality design and construction to ensure that the experience of climbing on Bendcrete walls will be second to none. Our products are subject to continuous testing and development to meet the highest possible standards.

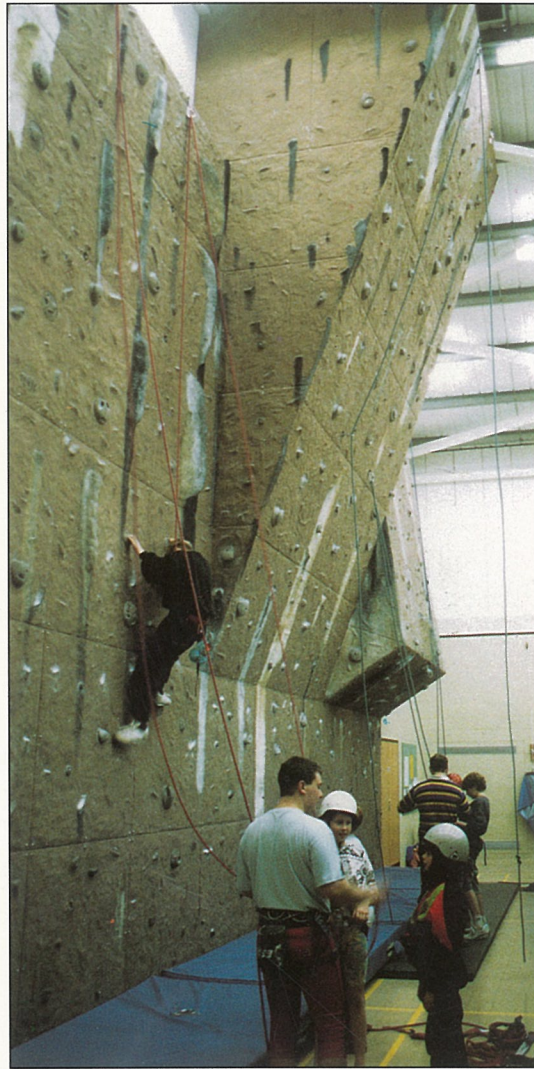

'Climbing quality' is our hallmark and is maintained by working with and listening to the country's leading climbers, teachers and managers.

## PRODUCT RANGE

1. Resin panel systems - curved and flat.
2. Plywood panels for competition and low cost walls.
3. Concrete walls indoors or out in hand crafted or sprayed and carved finishes.
4. Competition climbing walls.
5. Bolt-on holds and disc holds.
6. Children's Playgrounds special features.
7. Scenic rockwork for swimming pools and landscape.
8. Special Projects.
9. Management Plans and Feasibility Studies.
10. Safety Inspections.
