No holds barred

BENDCRETE CLIMBING WALLS

BEN MOON RANGE

Ben Moon was the first climber in the world to climb the grades of 8c and 8c+. Ben, arguably the worlds top sport climber, has worked with Bendcrete to design the finest range of bolt-on holds available.

His objective was to design holds with Fontainebleau like friction that would be comfortable to use. This we feel has been achieved and these holds are ideal for either updating an existing facility or developing your own training area.

Large 48 – 56 approx. size 160mm Dia.

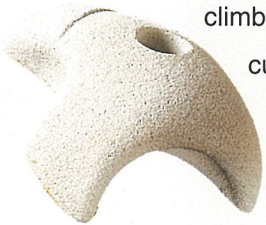

Medium 36 – 47 approx. size 120mm Dia.

Small 15 – 35 approx. size 90mm Dia.

Extra small 1 – 14 approx. size 40mm Dia.

GRATTONS RANGE

Grattons are a range of 60 holds that have been designed to be tendon friendly. Created by Allen Williams, a renowned boulderer, they can be used to produce routes of all grades of difficulty, from introductory climbs to routes for the world cup finals. They are generally thought of as some of the best bolt-on holds yet made.

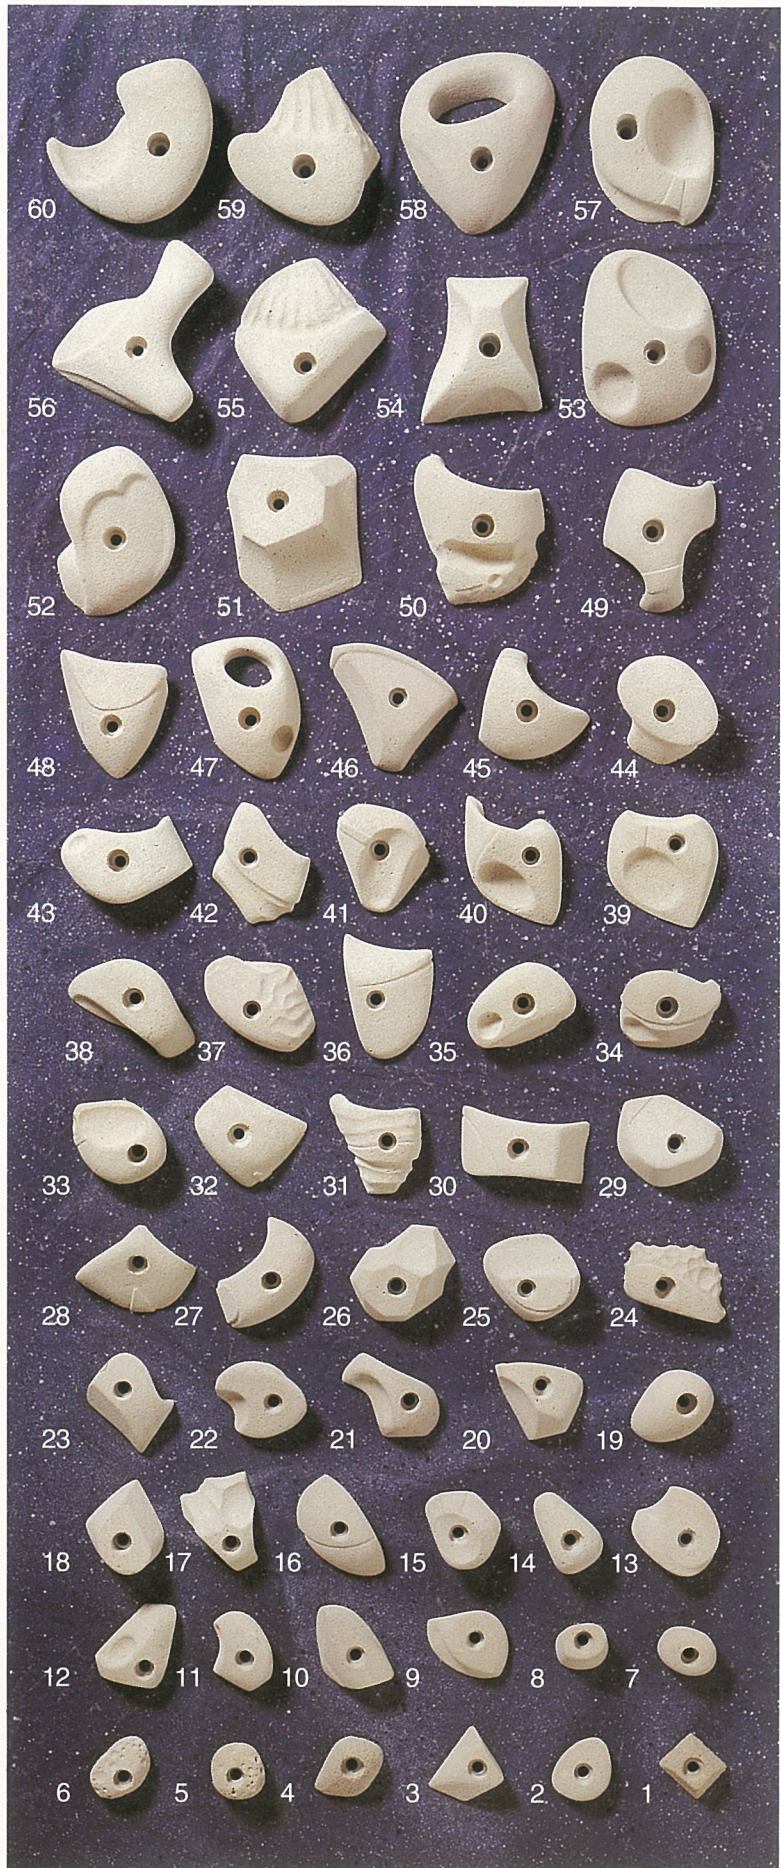

Large 50 – 60 approx.
size 160mm Dia.

Medium 28 – 49 approx.
size 120mm Dia.

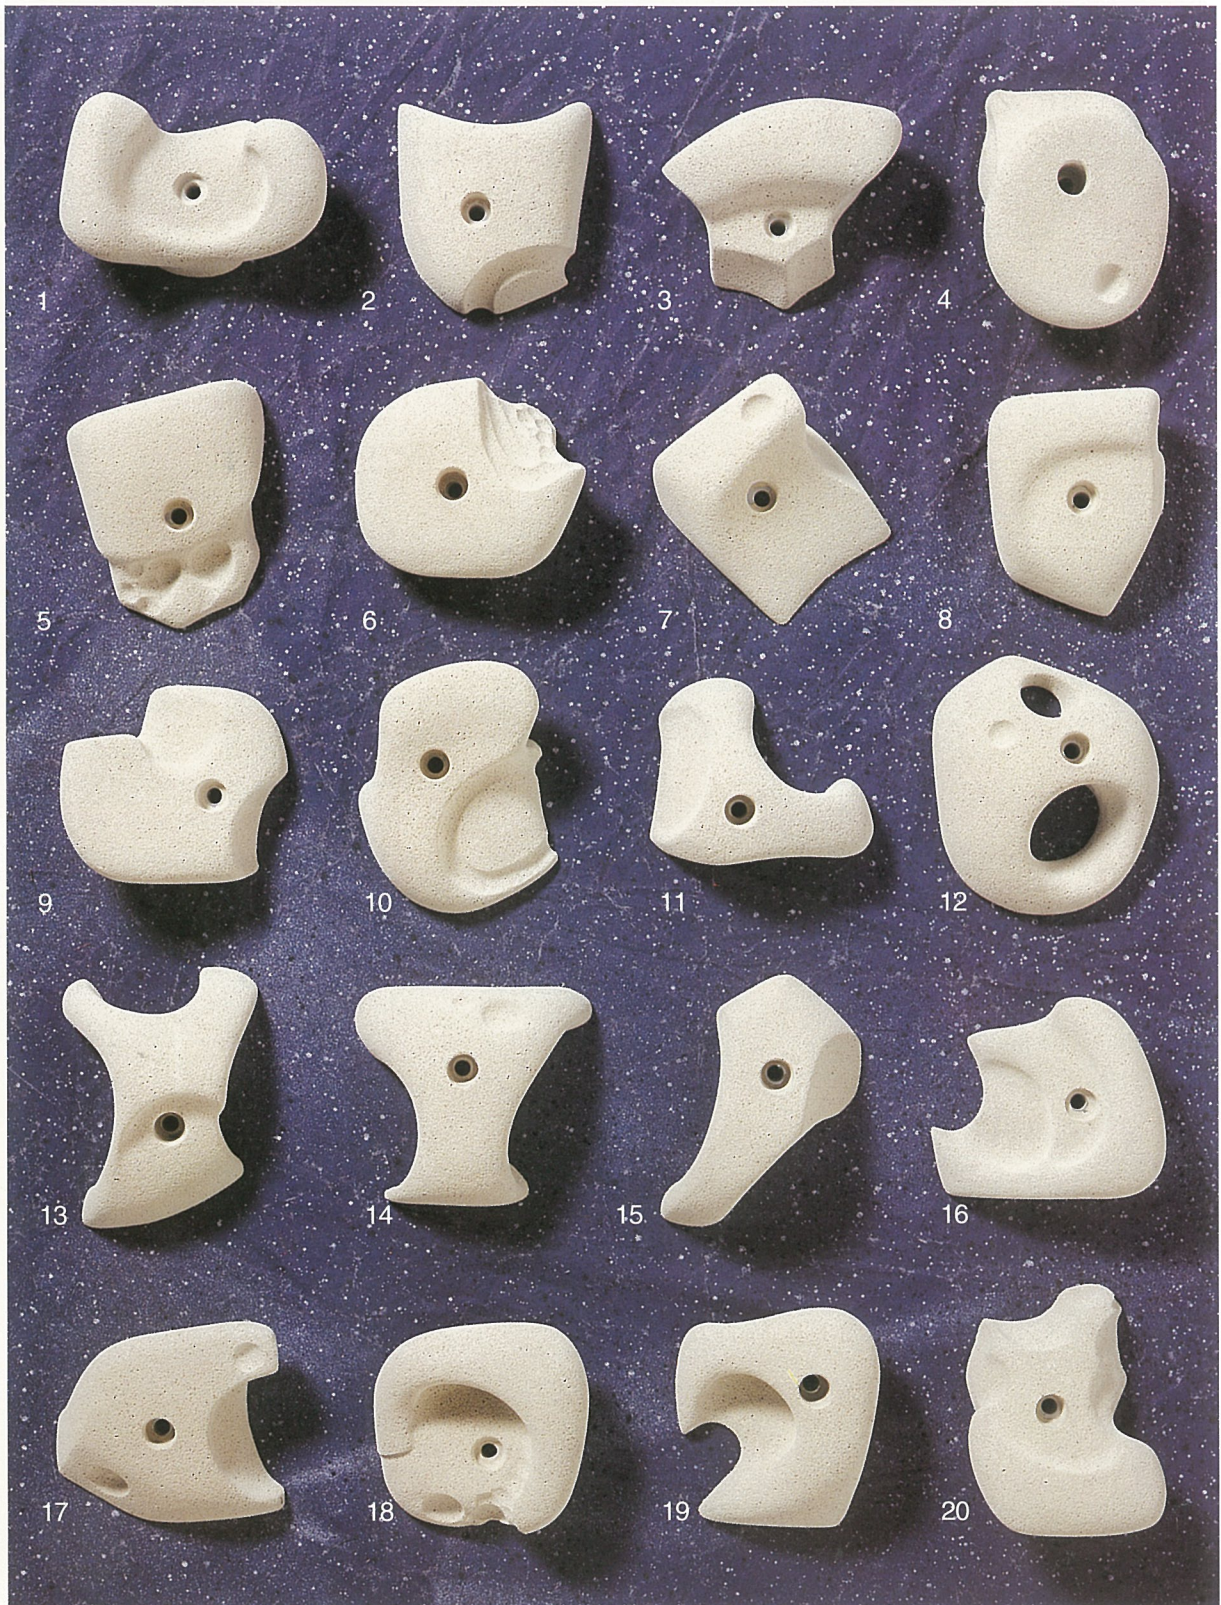

Small 9 – 27 approx.
size 90mm Dia.

Extra small 1 – 8
approx. size 40mm Dia.

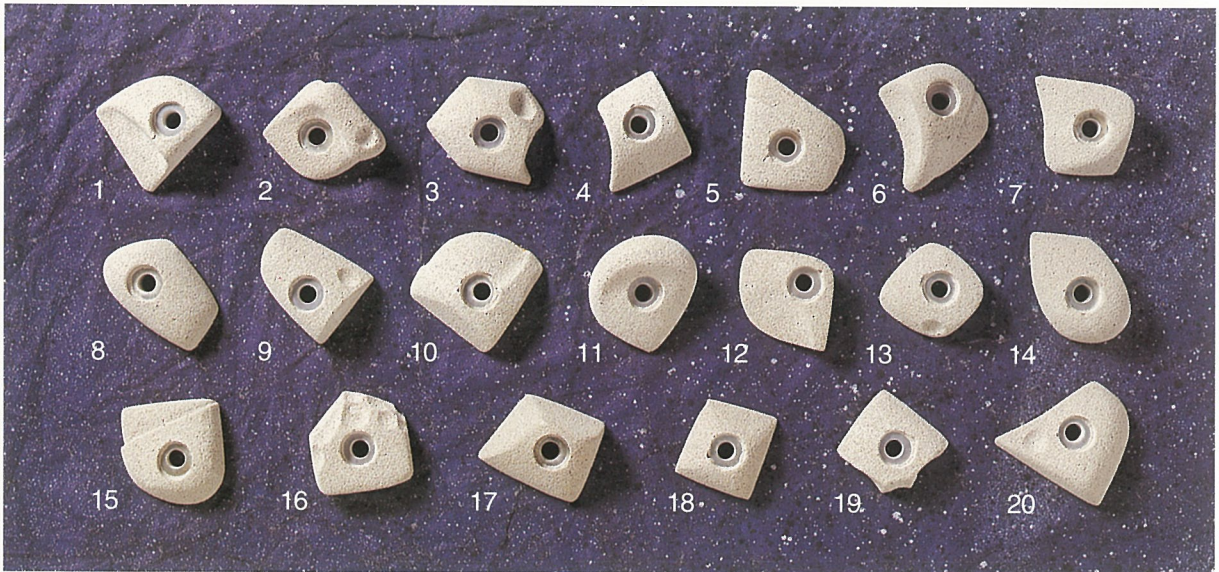

JUGS OF JUSTICE

As an extension to our Gratton range we have produced a range of 20 extra large holds. Affectionately known as The Jugs of Justice they are perfect for introducing novice climbers or route setting on steep overhangs and roofs.

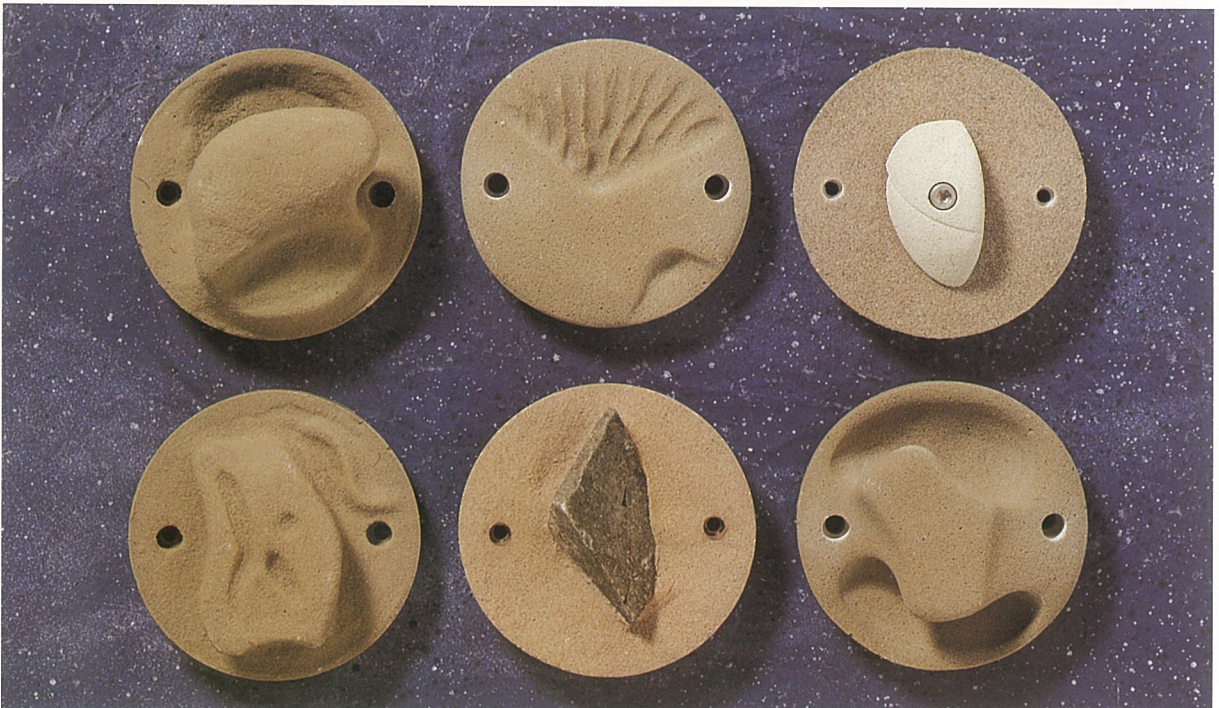

EDGES OF DESPAIR

And that is exactly what they are. This range of 20 little crimps utilises the same technology as our Gratton range providing tiny gritstone edges these can be used for creating desperate problems for the top climbers or used as intricate footholds for mere mortals.

DISC HOLDS

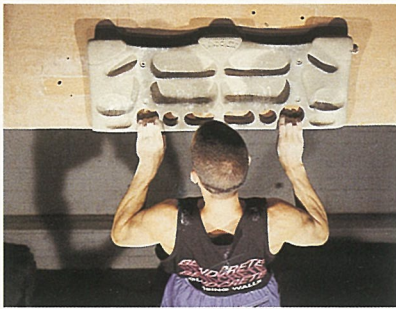

Disc holds offer a variety of inset holds to provide pockets not found on protruding holds. Available in a standard range of 50 holds we also provide a flat surface inset that can carry bolt-on holds for competitions as well as individual holds that have rock inset.

TRAINING AIDS

FINGERBOARD

As a training aid Bendcrete's Fingerboard is unsurpassable. Designed to be gentle on fingertips and tendons yet tough enough to make you sweat, it is guaranteed not to polish after years of use. This makes it an ideal method for building up finger strength, either on its own or as an addition to the existing facilities.

TRAINING TILE

The new Training Tile is a revolutionary concept in climbing technology. Developed in conjunction with climbers this simple tile will appeal to all types of climbers.

Superb on its own as a fingerboard it can be developed into a 'ripper' traverse by placing a number of them side by side. Alternatively a campus or plyometric board can be built by positioning the tiles on top of each other while turning the tile around offers alternatively profiled edges.

POWERGRIP

One of our latest developments is the introduction of Powergrip Friction Paint.

Developed to provide a non-slip surface making it ideal for coating walls and boards at home to create or improve your own personal climbing facility.

"T" NUTS

"T" Nuts are a means of fixing bolt-on holds to plywood board securely and permanently, allowing unlimited replacement of holds from the single fixing. Supplied in one size only, M10, they are compatible with all our hold ranges.
